

A Accessibility criterion sensitivity**B PAM filter versus accessibility****C Interpretation**

Criterion comparison (55 therapeutic genes)			
State	Strict	Relaxed	Difference
Homeostatic	32.7%	70.9%	38.2 pp
Naive	45.5%	65.5%	20.0 pp
Acute LPS	49.1%	69.1%	20.0 pp
Tolerized	49.1%	69.1%	20.0 pp
Sham	65.5%	81.8%	16.3 pp
Stroke	60.0%	80.0%	20.0 pp

Strict = HEAL PAM+chromatin targetability using the midpoint criterion.

Relaxed = any ATAC-seq peak overlap with the CRISPRa promoter window. This is an accessibility sensitivity analysis, not a validated guide-efficacy estimate.
