

A Known motifs enriched in surgical/stroke-context promoters (n=10)

B Interpretation

Biologically plausible hits:

T-bet (Tbx21)
IFN- γ /innate immunity TF
60% of surgical/stroke-context, 0% constitutive
Consistent with IFN- γ signaling post-surgery

PRDM1 (Blimp-1)
Terminal differentiation of immune cells
50% of surgical/stroke-context, 7% constitutive

Hoxc13, bHLH80, Foxf1
Less clear microglial function
Reported for completeness

Limitation: n=10 promoters (3 of 13 surgical/stroke-context genes not mapped by HOMER). Low power for rare motifs.
