

**A Gene-level concordance
(55 therapeutic genes)**

**B Direction of discordance
(sham opens, does not close)**

C Interpretation

Cross-dataset summary
=====

Jaccard index (1kb bins): 0.457
Gene concordance: 34/55 (61.8%)

Discordant genes: 21
Closed→Open (sham opens): 20
Open→Closed (Megf10): 1

Interpretation:
Most discordance is Gosselin-closed
and Zhang-sham-open. This is compatible
with post-surgical activation, but may
also reflect protocol, depth, gating,
or batch differences.
The sole exception (Megf10) has a
unique pattern across all states.
