

A Observed vs uniformly shuffled peaks

B Summary statistics

State	Obs.	Rand.	z-score
Homeostatic	70.9%	2.1%	35.9
Naïve (PP)	65.5%	1.7%	36.6
Acute LPS (PL)	69.1%	1.8%	35.6
Tolerized (LL)	69.1%	1.7%	38.5
Sham	81.8%	3.1%	33.4
Stroke	80.0%	3.1%	33.0

1,000 permutations per state
All $p < 0.001$

Interpretation: observed promoter overlap is incompatible with uniform random peak placement. This is not promoter-matched enrichment and does not validate CRISPRa activity.
