

A Evidence-aware prioritization

1 Choose delivery architecture

Size and payload constraints

2 Choose expressed TSS

Canonical + cell-state sensitivity

3 Require guide-site support

Complete spacer+PAM in peak

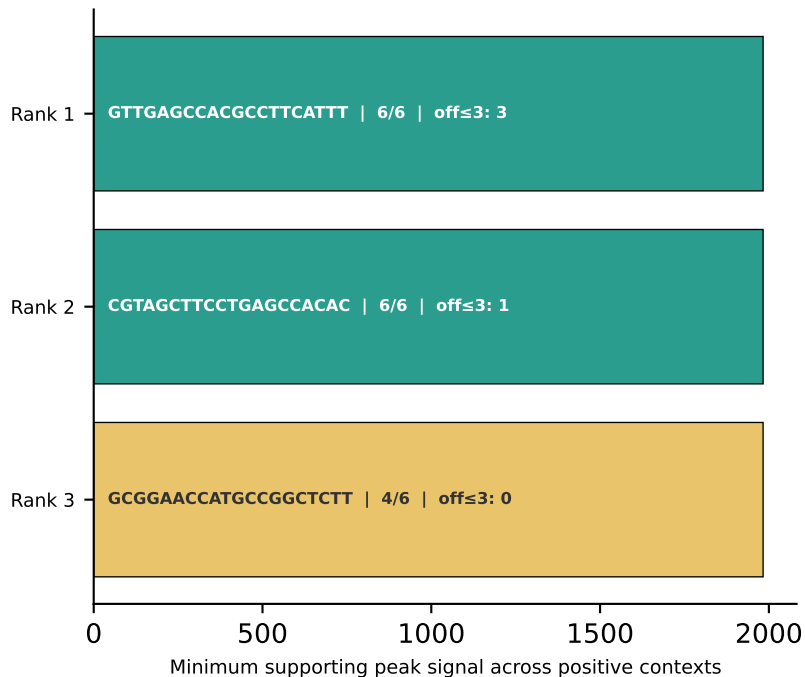

4 Inspect robustness

Replicates, depth, caller, context

5 Validate experimentally

Activation, function and safety

B Tfe3 Un1Cas12f1 candidate protospacers

Predictive ranking; PAM-aware Bowtie screening does not replace purpose-built off-target tools or experimental safety assays.
